Tables

Table 1 Revision history	4
Table 2 Release Information	5

1 Introduction

1.1 Purpose

This specification documents the build process for QCWWAN drivers deliverables.

1.2 Revision history

Table 1 Revision history

Version	Date	Description
1.1	Jun 2015	Initial release

2

2 Basic Release Procedures

2.1 Versioning Scheme

- CRM versions are multiples of 1 (ie. 1.00.35, 1.00.36, 1.00.37, 1.00.38...)

2.2 Scheduling release

All CRM releases should be scheduled at least a week before the release date, ideally 2 weeks prior. Schedule the release at:

<http://go/tiberium>

Table 2 Release Information

WWAN Drivers	WWAN Drivers Description
QUD.WIN.1.1-<100XX-GENERAL>	Tool descriptive name: This will build the full package including drivers and installer

2.3 Release notes

The release notes are updated as part of readme.txt file.

2.4 Perforce changes

All changes needed for a release must be checked in prior to doing a build because the build script gets the latest versions before it builds.

2.5 Build locally

The purpose of building locally is to find errors before running the build request.

From the command line, traverse to the appropriate folder for your client spec, then run the Batch build command. This will run the build script.

2.6 Manually create a label

Within P4 labels, create a copy of an existing label by right clicking on the existing label and selecting “Create/Update label using XXXX as the template”, enter new name, make sure it is unlocked.

1 Within client view select the files to label, then right click on label and select “Add/Replace
2 files...” Here you can sync the files to a label, changelist or head revision. To create a label for
3 release, do the same as a config file, sync in same order as is listed in the config file lists.

4 Example:

5 label: QUD_WIN_1.00.36

6 head_paths: //depot/QMI/win/qcwwan/...

7 1) Sync all //depot/QMI/win/qcwwan/ files to QUD_WIN_1.00.36

8 2.7 Build using CRM Build Request Tool

9
10 This request tool runs our build script on a CRM build server. Follow the instructions in the
11 following sections to build each release.

12 Once the request has been sent a series of emails are received that indicate the status of the build.
13 When it successfully completes the build path will be part of the emails

3 QUD.WIN.1.1

3.1 Introduction

The QUD.WIN.1.1 is built for two reasons

1. Provide generic build for internal Qualcomm use and select external customers.

This build creates an installer with drivers.

3.2 Build Environment:

1. Visual Studio 2010
2. Perl 5.6
3. Microsoft Windows Driver Kit 8186 (go/wdk)
4. Install Shield 2012

3.3 Build script description

3.3.1 CRM Build Syntax

buildCustomer.bat: This batch file should be used to build drivers package on CRM server

3.3.2 Internal Build Syntax

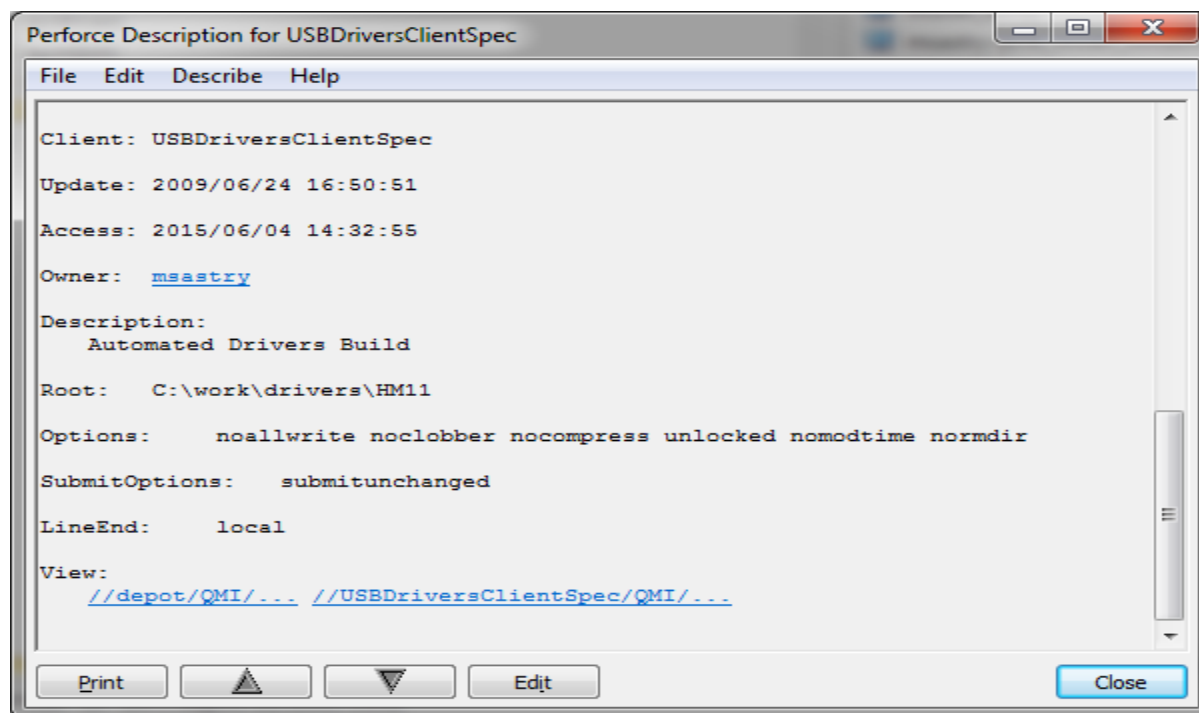

buildCustomerLocal.bat: This batch file should be used for building drivers package on local system.

3.3.3 Perforce

Server: qctp402:1666

Location: //depot/QMI/win/qcwwan

Client Spec:

Lable : QUD_WIN_x.xx.xx (For Ex. QUD_WIN_1.00.36)

3.3.4 Versioning

Please make sure the local copy is synced to the head of the perforce path.

3.3.4.1 Changing version in INF files:

INF files Location: //depot/QMI/win/qcwwan/build/

Files to change: qcfilter.inf, qcmdm.inf, qcnet.inf, qcser.inf, qcwwan.inf, qdbus.inf

Update the DriverVer <Date,Version>. Update to the next incremental number

3.3.4.2 Folder and File Mappings

qcfilter.inf: Sources are in filter folder, this driver is for QMI communication.

qcser.inf: Sources are in serial folder, information file for Ports (DIAG, SER, NMEA, etc.)

qcmdm.inf: Sources are in serial folder, information file for MODEM (MODEM).

qcnet.inf: Sources are in ndis folder, information file for Network Adapter (Ethernet NDIS 5.1 driver)

qcwawn.inf: Sources are in ndis folder, information file for Network Adapter (WWAN NDIS 6.20 driver)

1 qdbusb.inf: Sources are in qdss folder, information file for QDSS (QDSS)

2 **3.3.4.3 Changing version in Resource (RC) files:**

3 Filter Driver RC file: //depot/QMI/win/qcwwan/filter/qcfilter.rc -> Open in any editor and update
4 to next version number.

5 NDIS Driver RC file: //depot/QMI/win/qcwwan/ndis/qcusbnet.rc -> Open in any editor and
6 update to next version number.

7 Serial Driver RC file: //depot/QMI/win/qcwwan/serial/qcusbser.rc -> Open in any editor and
8 update to next version number.

9 **3.3.4.4 Changing version in Source files:**

10 We have to hard code the version numbers in 2 .c files, this is needed for printing version
11 numbers in the log files:

12 NDIS Driver: //depot/QMI/win/qcwwan/transport/usb/usbnp.c -> Search for “Driver Version”
13 and change the version number.

14 Serial Driver: //depot/QMI/win/qcwwan/serial/qcnp.c -> Search for “Driver Version” and
15 change the version number.

16 **3.3.4.5 Changing version in Installer:**

17 File: //depot/QMI/win/qcwwan/installer/QualcommDriverInsatll.ism -> Search for
18 “ProductVersion” and update the version number to the next installer version.

19 File: //depot/QMI/win/qcwwan/installer/QualcommDriverInstall/String1033.txt -> Search for
20 “PRODUCT_VERSION” and update the version number to the next installer version.

21 **3.3.5 Readme Update**

22 The readme.txt is in the following path //depot/QMI/win/qcwwan/installer/. Please update the
23 readme.txt with the changes for this release

24 **3.4 CRM Build Request**

25 Please update the files and check-in the files to the perforce and update the LABEL
26 QUD_WIN_1.00.XX with all the files. And submit the build request using go/tiberuim.

27 Following is the screen shot of the build request:

Subject: Prepare Build for distribution: Build QUD.WIN.1.1-10036-GENERAL-7

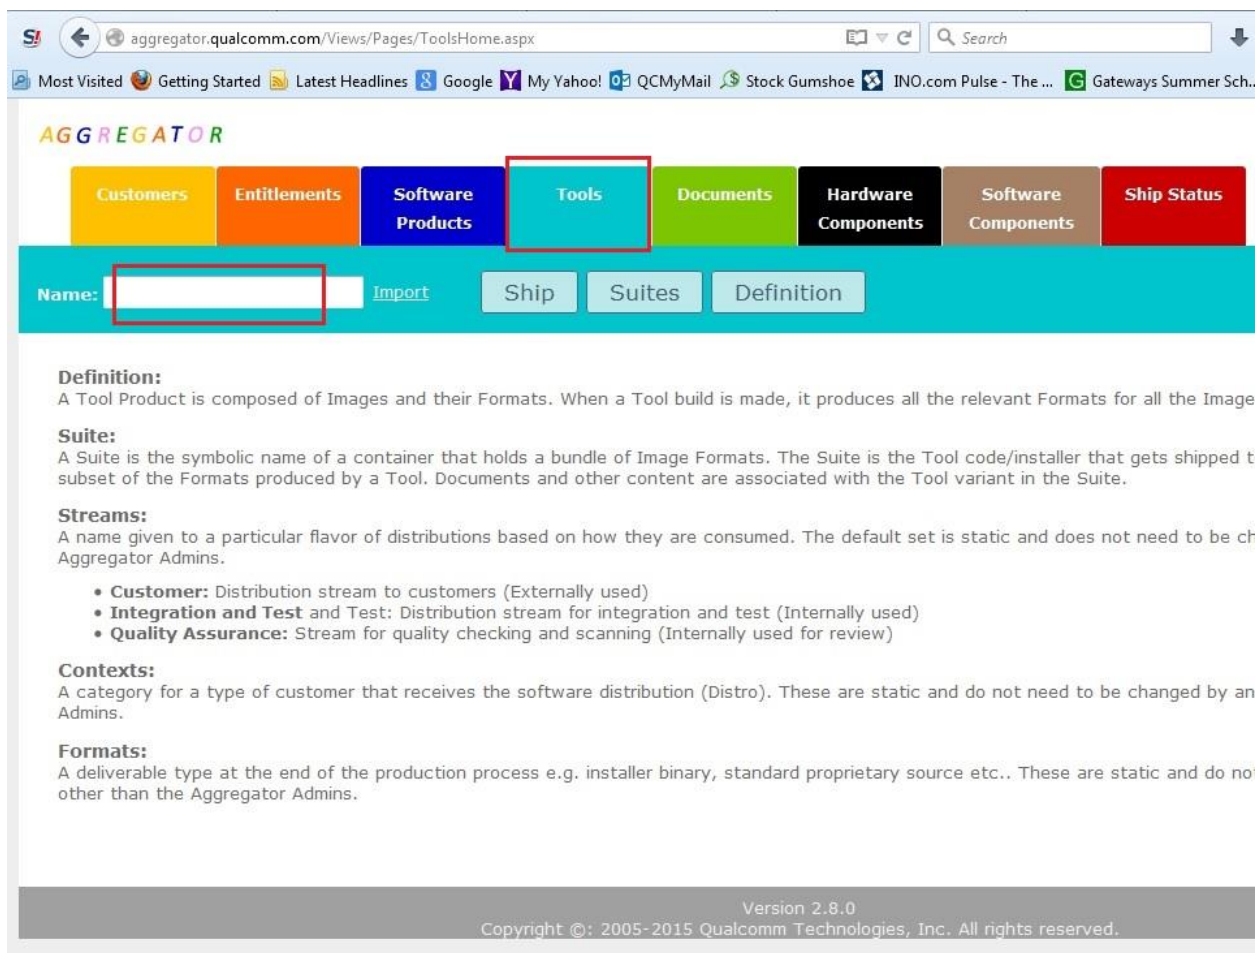

Whenever you are ready, please click on the link to make this build ready for distribution:

<http://tiberium.qualcomm.com:80/BS?ID=QUD.WIN.1.1-10036-GENERAL-7>

NOTE: Please do not click the above link if you are not owner of this build.

The screenshot shows the Qualcomm Aggregator website. The navigation bar includes links for Customers, Entitlements, Software Products, Tools (highlighted with a red box), Documents, Hardware Components, Software Components, and Ship Status. The main heading is "Where Customers Meet Entitlements". Below this, a diagram illustrates the relationship between customers and entitlements. On the left, a yellow box labeled "Customer" is connected by a solid line to an orange box labeled "Entitlement (SW & Tools & Docs)". Below the "Customer" box, a stack of gray boxes represents different manufacturers: HTC, Samsung, and others (indicated by dots). Below the "Entitlement" box, a stack of gray boxes represents different software versions: 8960.LA.1.0 (modem_proc LINUX Source), 8260.LA.2.0 (Binary), and others (indicated by dots). The footer of the page indicates "Version 2.8.0" and "Copyright ©: 2005-2015 Qualcomm Technologies, Inc. All rights reserved."

AGGREGATOR

Customers Entitlements Software Products **Tools** Documents Hardware Components Software Components Ship Status

Name: Import Ship Suites Definition

Definition:
A Tool Product is composed of Images and their Formats. When a Tool build is made, it produces all the relevant Formats for all the Image

Suite:
A Suite is the symbolic name of a container that holds a bundle of Image Formats. The Suite is the Tool code/installer that gets shipped to a subset of the Formats produced by a Tool. Documents and other content are associated with the Tool variant in the Suite.

Streams:
A name given to a particular flavor of distributions based on how they are consumed. The default set is static and does not need to be changed by an Aggregator Admins.

- **Customer:** Distribution stream to customers (Externally used)
- **Integration and Test** and Test: Distribution stream for integration and test (Internally used)
- **Quality Assurance:** Stream for quality checking and scanning (Internally used for review)

Contexts:
A category for a type of customer that receives the software distribution (Distro). These are static and do not need to be changed by an Admins.

Formats:
A deliverable type at the end of the production process e.g. installer binary, standard proprietary source etc.. These are static and do not change other than the Aggregator Admins.

	<h2>Build Infrastructure</h2> <p>go/buildinfra_team</p>
<p>Build Infra Resources</p> <p>Tiberium</p> <p>Build Infra Community</p> <p>Contact Us</p>	<h3>Tiberium Will Stop Promoting the Builds to “PROD”</h3> <p>Engineering,</p> <p>Beginning “06/16/2015” to increase the reliability of the build process Tiberium will not be promoting the builds to “PROD” when build is being moved to “Completed” state. If you want your build to be in “PROD” area, please select the “Build Type” as “PROD” in Tiberium UI or in the BRF file when you are submitting the build.</p> <p>Please feel free to open an CRMHELP ticket if you have any questions.</p> <p>Regards,</p>

3.6 Notes

We always use ToolW7_Gobi as Tool Env for building the tiberium build and this internally uses the QCTCRMBLD10 as the CRM build server. There is one issue with the build, the user aswbldsv should be logged into the server before submitting the build. Please refer to the JIRA ticket <https://jira-qualcomm.com/jira/browse/QSOHELP-43578>. If the build fails please reopen the ticket.
